

## Track Lining Scope

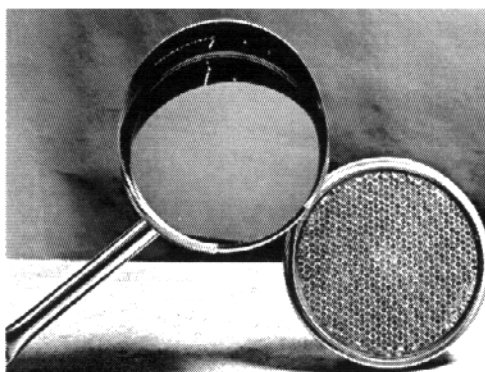

### Spot, line and smooth track effectively

Use a Western-Cullen-Hayes Track Lining Scope to help assure the accuracy of spot lining and surfacing. Line and smooth track anywhere with this low cost, easily portable, instrument. May be extended to eye level for stand-up sighting.

Scope with Positive Tilt Control.

The lower telescope, in precise parallel alignment with the upper, allows instantaneous back-sighting without adjustment. Give accurate sighting up to 600 feet. All aluminum; total weight is only 12 pounds. Positive Tilt Control enables the operator to set the horizontal crosshair on spot board or target point ahead and keep it there. Available with vise-like rail clamp. Accessory Mirror/Reflector assists operator in watching for unwarned train movements. Carrying Case is also available as an option.

Mirror/Reflector Accessory
